

NectarCAM F2F in Bordeaux: Concluding remarks

3 years ago in Barcelona

At that time we were:

- Preparing for the CDMR (happened 1 year after)
- Expecting to deliver the camera in 2020 or maybe 2021
- Already tasting wine

What we did in these 3 years

- We (almost) passed the CDMR
- The detector is now (almost) complete and ready for global tests (was in the process of dismounting in Barcelona).
- Tendering for production of 8 more cameras has started.
- Scientific software is now starting to be taken care of (should add the responsibility in WBS).
- Data storage is now solved for early data.
- The interface to ACS is being worked out

Future meetings

Thanks to Thierry, the LP2i team (Fanny Cadou et al) and the ISM for hosting the event.

Next meetings:

- Joint MST NectarCAM/FlashCam session in Napoli? -> should answer quickly
- Lively discussions and preparation of on-site installation -> Frequency of NectarCAM meetings should increase.
- Proposal: 1 every 3 months, alternatively zoom and F2F
- Next meeting F2F should be before TRR in March
- Location not decided: Annecy or Toulouse are possible. In my opinion Saclay could be a good place (not everyone has seen the full camera yet).
